Project Design Phase

Problem - Solution Fit Template

Date	01 October 2026	**Team ID**	SWTID-2026-6297
Project Name	Implement Client Script & UI Policy (Incident)	**Maximum Marks**	2 Marks
Team Leader	Anirudh	**Team Size**	3 Members
Team Members	Shyam Sundar, Mohan Raj	**Module / Table**	Incident Management [incident]

Purpose of Problem - Solution Fit Canvas:

The Problem-Solution Fit ensures that the identified challenges in enterprise ServiceNow Incident Management (such as poor closure quality, accidental future dates, and missed VIP escalations) are directly resolved by the implemented Client Scripts and UI Policies. It establishes clear alignment between agent behavior, form triggers, and real-time validation feedback.

Problem - Solution Fit Analysis (Pillar Breakdown):

Canvas Dimension	Tag	Details & Project Fit (Implement Client Script & UI Policy - Incident)
1. Customer Segment(s)	**CS**	Service Desk Tier 1 & Tier 2 support agents, Incident Managers, ITIL Quality Leads, and corporate VIP stakeholders.
2. Jobs-To-Be-Done / Problems	**JBP**	Accurately log incidents without invalid timestamps; identify VIP callers immediately; enforce full resolution notes (>= 20 chars); prevent tampering with closed records.
3. Triggers	**TR**	Form load event (onLoad), selecting a caller (onChange), switching state to Resolved/Closed, and clicking Submit/Save (onSubmit).
4. Emotions: Before / After	**EM**	**Before:** Frustration from delayed server rejections and audit penalties for poor closure notes. **After:** Confidence and clarity through instant visual highlights, guided mandatory fields, and real-time inline alerts.
5. Available Solutions	**AS**	Default ServiceNow forms lacking dynamic styling; pure server-side Business Rules that only notify after database roundtrip; manual post-incident QA auditing.
6. Customer Constraints	**CC**	Strict resolution SLAs; high ticket volume limiting time per incident; need for non-blocking UI speed without browser freezing.
7. Behavior	**BE**	Agents rushing through forms often input single-word close notes ('fixed', 'resolved') or fail to notice caller VIP status hidden in sys_user records.
8. Channels of Behavior	**CH**	**Online:** ServiceNow Service Operations Workspace and Classic Incident Form. **Offline:** Service Desk daily shift handovers and ITIL incident post-mortem reviews.
9. Problem Root Cause	**RC**	Absence of proactive, client-side browser evaluation; form fields remaining static and failing to dynamically adapt to ticket lifecycle transitions.
10. Your Solution	**SL**	**Client Scripts:** onLoad focus & banner; onChange VIP flash; onSubmit future date block & 20-character resolution note check. **UI Policies:** Dynamic display and mandatory requirement of Close Code and Notes on Resolved; total read-only lockdown on Closed state.

Visual Problem - Solution Fit Canvas Diagram:

1. CUSTOMER SEGMENT(S) CS

- Service Desk Tier 1 & 2 Support Agents
- Incident Managers & ITIL Process Owners
- Corporate Escalated VIP Callers

6. CUSTOMER CONSTRAINTS CC

- High ticket volume & strict SLA targets
- Cognitive fatigue from repetitive forms
- Strict ITIL audit compliance mandates

5. AVAILABLE SOLUTIONS AS

- Standard static ServiceNow incident form
- Backend Business Rules (delayed alerts)
- Manual post-incident ticket auditing

2. JOBS-TO-BE-DONE / PROBLEMS JBP

- Log, prioritize & triage incident tickets
- Block accidental future opened timestamps
- Enforce >= 20 char resolution notes

9. PROBLEM ROOT CAUSE RC

- Absence of client-side browser validation
- Validation feedback only after DB commit
- VIP user indicators buried in user record

7. BEHAVIOR BE

- Agents enter minimal closure text ("fixed")
- Accidental misclicks on calendar popups
- VIP tickets handled at standard speed

3. TRIGGERS TR

- Form load & caller selection changes
- State changed to Resolved / Closed

10. YOUR SOLUTION SL

- Client Scripts: onLoad banner, VIP flash
- onSubmit check for >= 20 char close notes
- UI Policies: Mandatory close code on Resolved
- Total read-only lockdown on Closed state

8. CHANNELS OF BEHAVIOR CH

- Online: ServiceNow ITSM Workspace & Portal
- Integration: REST API & Inbound Email
- Offline: Service Desk daily handover meetings

4. EMOTIONS: BEFORE / AFTER EM

- Before: Frustrated by rejections & rework
- After: Confident with instant visual alerts
